Spensa’s Agronomic Platform Trapping Module is a mobile trap data collection system that visualizes and collects pest information from traps, all within an easy to use interface.

**Visualize Pest Populations**
Process and access recorded pest data and pesticide applications from one location.

**Access and Log Trap Data Anywhere**
View information in near real-time using a computer or smartphone from anywhere.

**Track Lure Life Info with Reports**
Monitor the status of each lure so you can be sure your traps are always working at full strength.

**Send and Share Reports**
Share with stakeholders to make collective decisions about pest management.
